

IN THE SPECIFICATION

Please replace paragraph [0018] with rewritten paragraph [0018] below:

[0018] In the example shown the outlet 20 provides power through cord 26 to a small pump 28. Since the generator can be placed close to the pump 28 in view of its inconspicuous nature, the cord 26 can be made short (less than 3 ft.) A block diagram of one embodiment employing the regulator 18 and battery 22 is shown in FIG. 2. The voltage regulator charges the battery 22 through diode [[20]] 30 to prevent the battery from discharging back through the solar array 18.

Please replace paragraph [0020] with rewritten paragraph [0020] below:

[0020] In a preferred embodiment, the solar panel 16 supplies power to a rechargeable battery, such as a lead-acid battery 22, although other types of rechargeable batter, such as NiC[[a]]d, could be employed. The battery permits the device to operate after dark, and is essential if the device is to be used to power small garden accent lights, for example.
